<sup>\*</sup> The Accumulator Share Class (Class A) was launched on 10 April 2018

<sup>\*\*</sup> Performance figures are calculated using the Value Added Monthly Index "VAMI" principle. The VAMI calculates the total return gained by an investor from reinvestment of any dividends and additional interest gained through compounding. The Annualised rate is an indication of the average growth of the Fund over one year. The value of the investment and the income yield derived from the investment, if any, may go down as well as up and past performance is not necessarily indicative of future performance, nor a reliable guide to future performance. Hence returns may not be achieved and you may lose all or part of your investment in the Fund. Currency fluctuations may affect the value of investments and any derived income.

<sup>\*\*\*</sup> Returns quoted net of TER. Entry and exit charges may reduce returns for investors.

## **Market Commentary**

#### Introduction

### Market Environment and Performance

#### **Fund Performance**

# **Market and Investment Outlook**

Malta's economy continued to demonstrate resilience and growth, with second-quarter growth of 4.40% year-overyear. The reading marked the fourteenth consecutive quarter of expansion, albeit at the weakest pace since the thirdquarter of 2022 amid a slowdown in consumer spending and government expenditure.

Foreign trade, particularly exports, remains a key driver of the economy. The strength of Malta's export sector is evident in the robust 6.40% year-over-year growth recorded in the second quarter. Additionally, business confidence remained strong, despite lower compared to June's reading. Tourism, a cornerstone of Malta's economy, continues to thrive with traffic volumes at the Malta International Airport proving to be well above the record passenger movements handled in 2023.

Europe's economy, initially proving somewhat resilient, has in recent months consistently shown signs of weakening, particularly as its largest economies continue to face a deterioration in economic metrics. Recent Purchasing Managers' Index (PMI) data supports these trends, indicating a slowdown in the Eurozone and a potential technical recession in Germany, Europe's largest economy.

September's Eurozone Composite PMI, albeit revised higher, signaled total business activity in Euro Area private sector activity decreased for the first time since February, as the three biggest economies in the Euro Area - Germany, France and Italy - recorded contractions simultaneously for the first time in 2024 so far. Overall, services slowed (51.4 vs 52.9 in August) and the manufacturing contraction deepened (45 vs 45.8 in August) as demand for euro area goods and services fell at the quickest pace in eight months. This, leading to backlog reductions and a slightly faster rate of job cutting. Business confidence too weakened, yet fractionally, taking it further beneath its long-run average.

Inflation, consequent to the base effect, particularly on energy, fell to 1.8% in September, the lowest since April 2021, compared to 2.2% in August and preliminary estimates of 1.9%. Core inflation, albeit marginally, eased to 2.7%. A particular concern for the ECB is services inflation, which remains anchored at or above 4.0% for a fifth consecutive month. The labour market remained healthy, with unemployment rate revolving at notable lows (6.4% in August), and significantly below a 20-year average of 9.3%.

Consequent to the worsening economic trends, the European Central Bank (ECB) eased monetary policy by cutting interest rates by 25 bps in September, driving yields overall lower (meaning prices rose). German and French 10-year government bond yields declined over the quarter but underperformed relative to Italy and Spain, which were among the strongest performers in Europe.

In September, the Malta High Income Fund registered a gain of 0.63% for the month, outperforming its internally compared benchmark which saw 0.52% loss, as locally listed equities underperformed the fixed income segment.

The narrative for credit markets remained largely unchanged throughout the third quarter, with investor focus centered on economic data and central bank policy. In the most recent policy meeting, central bankers demonstrated their willingness to adopt an accommodative bias, depending on economic needs, with a willingness to adjust policy accordingly to foster a healthy economic environment. The ECB continued to emphasize on data dependency, eyeing inflation, particularly within the services sector. Safeguarding the employment market too remains key.

The anticipation of year-end interest rate cuts fosters a positive outlook for the global bond market. We believe locking in current attractive coupon levels is prudent before potential policy easing.
