### **Investment Objective and Policies**

The Fund seeks to provide stable, long-term capital appreciation by investing in a diversified portfolio of local and international bonds, equities and other income-generating assets. The Investment Manager shall diversify the assets of the Fund among different assets classes. The manager may invest in both Investment Grade and High Yield bonds rated at the time of investment at least "B-" by S&P, or in bonds determined to be of comparable quality, provided that the Fund may invest up 10% in nonrated bonds, whilst maintain an exposure to direct rated bonds of at least 25% of the value of the Fund. Investments in equities may include but are not limited to dividend-paying securities, equities, exchange traded funds as well as through the use of Collective Investment Schemes. The Fund is actively managed, not managed by reference to any index.

Fund Type	UCITS		
Minimum Initial Investment	€2,500		

#### Sustainability

The Fund is classified under Article 6 of the SFDR meaning that the investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

\* Data in the chart does not include any dividends distributed since the Fund was launched on 19 November 2018.

\*\* Performance figures are calculated using the Value Added Monthly Index "VAMI" principle. The VAMI calculates the total return gained by an investor from reinvestment of any dividends and additional interest gained through compounding.

\*\*\* The Distributor Share Class (Class B) was launched on 19 November 2018. The Annualised rate is an indication of the average growth of the Fund over one year. The value of the investment and the income yield derived from the investment, if any, may go down as well as up and past performance is not necessarily indicative of future performance, nor a reliable guide to future performance. Hence returns may not be achieved and you may lose all or part of your investment in the Fund. Currency fluctuations may affect the value of investments and any derived income

\*\*\*\* Returns quoted net of TER. Entry and exit charges may reduce returns for investors.

Sector Breakdown

Introduction	October was the month when finally the US elections were the dominant factor in financial markets. The different economic agendas proposed by the two
Introduction	main contenders should have theoretically force markets in a sort of binary positioning, however market participants, as well as betting markets, voted Republican way ahead of the ordinary citizens. The so-called "Trump trades" championing energy, regional banks and Tesla stocks, crypto currencies and the US dollar have turned the month yielding an outlier result from a statistical perspective. Again other potentially disruptive events such as the conflict between Israel and Iran and its proxies turning hotter, or the disillusion regarding the measures announced by the Chinese authorities to get the domestic economy out of the construction sector-caused malaise did not make a difference for markets. Not even the sudden increase in US treasuries' yields has not worried investors, while in a normal environment it should have significantly shifted equities valuations to the lower. It looks like market participants are now focusing towards a some sort of "new normal" global environment with higher trade frictions, lower US taxes and deregulation in the US economy triggering a revival of M&As and public listings. Last time financial markets took this road it all ended up with a Global Financial Crisis and a global economy in tatters. The optimists will say this time is different, but we all know which are the most feared words in financial parlance.
	From the monetary front, the FED held no meeting during the month, but with inflation only just above its 2% target and wage pressures easing, there are already some uncertainties regarding how much it can cut interest rates going forward. It is evident that recent political developments have further pushed market expectations toward an even more hawkish stance, but the real game that we might see in the future is a renewed political clash between the future US President Trump and Chair Jerome Powell. In the Eurozone, the ECB reduced borrowing costs by a quarter-percentage point for the second month in a row after inflation fell quicker than expected and concerns over weak economic dynamics had intensified. Meanwhile, the above expectations October inflation numbers have bolstered the case for an additional quarter-point rate cut in December.
	In equity markets, we have recently seen a reversal of the "rotation trade" particularly on the backdrop of good earnings releases from large capitalization names and a strong underperformance from last months' value performers such as utilities, materials and real estate. What was unsettling was the rise in the yield curve as the odds of a Trump win were aligned with expectations of renewed inflationary pressures stemming from trade wars and increased fiscal deficits. The third quarter earnings season has come mostly in line with expectations as the US businesses maintained their margins and growth, while European businesses have been hurt by their high exposure to the flagging Chinese consumer. While initially Japanese equities seemed to be the surprise of the year, 2024 is shaping up as being one of the US and the rest. But beyond the fundamental exceptionalism of the American businesses and financial markets, inflation remains historically their biggest enemy. If inflation will eventually come back, as bonds markets seem to suggest at this point, these glorious times for equities will turn bleak once again, as in 2022. And no matter how protectionist the US economy may become, it does not live in vacuum, and sooner or later the travails it will cause to other markets will eventually come back to haunt it. No matter how great it will get by that point.
Market Environment and Performance	In October, the Eurozone Composite PMI, albeit revised higher, pointed to a stagnation in private business, as manufacturing (46 vs 45 in September) continued to contract although at a slower pace, while services (51.6 reading vs 51.4 in September) growth improved. Shrinking business activity levels in Germany and France offset expansion in Spain, Ireland and Italy. Meanwhile, there was a further weakening of demand conditions and the sharpest drop in employment since December 2020. Headline inflation rose to 2.0% in October from 1.7% in the previous month, while core inflation remained steady at 2.7%.
	The US economy portrayed nascent signs of cooling, with GDP growth recorded at an annualized 2.8% level in Q3, below the 3% performance in Q2, as the advanced reading from the Bureau of Economic Analysis showed. Leading indicators, notably PMI figures, although overall robust, fell short of expectations as the strong gains in the services sector failed to offset a continued decline in manufacturing output. Disinflationary trends sustained. The latest inflation release showed a modest slowing, as headline inflation fell for a sixth straight month to 2.4% in September, the lowest since February 2021, from 2.5% in August, yet above forecasts of 2.3%. Core inflation, which excludes volatile items such as food and energy, edged higher to 3.3% in September of 2024.
	In October equity markets have managed once again to avoid a negative monthly performance in spite of negative expectations driven by the seasonality factor and macroeconomic considerations. Whether the driving forces behind it was an overall good earnings season, expectations regarding a more business friendly Republican administration coming out form the US elections or the comeback of large cap equities returns, this fifth consecutive month of positive returns in equities pushed markets even further from analysts' expectations at the beginning of the year. Geographically wise, US markets had another strong run further compounding their outperformance year-to-date versus both developed and emerging markets. The S&P 500 index gained 1.62% led predominantly by the financials and communication sectors. European markets declined in line with deflating hopes of a swift revival of the Chinese economy following the decisive intervention of central authorities there, as the EuroStoxx50 and the DAX lost 3.4% and 1.2% respectively. From the fixed income side, October presented significant challenges as a confluence of factors - resilient US economic data, heightened uncertainty surrounding the US election, and persistent inflation - led to a sharp sell-off across major government bond markets. The 10-year US Treasury yield rose above 4.0%, with 7-10 year US Treasuries posting a c. 3.3% loss for the month. European sovereigns followed suit, albeit the moves proving to be less explicit. Aligned with such widening, global investment-grade bonds declined, with US investment grade noting a c. 2.25% loss. The more speculative segment within the credit markets outperformed with Euro high yield credit giving the best total returns over the month.
Fund Performance	In October, the CC Global Balanced Income Fund registered a loss of 0.54%.
	On the equity allocation, the Fund's portfolio has been readjusted, as the Manager made some tactical moves in response to recent market developments. New conviction names Fiserv Inc, Moody's Corp, Lam Research and MercadoLibre have replaced positions in Johnson & Johnson, Booking Holdings, TSMC, Bank of America, Crowdstrike Holdings, Samsung Electronics and Ahold Delhaize NV as in each case fundamental valuation and technical setup does make for an improved return potential over the short term. In the wake of the improved Chinese equity markets outlook following expected public economic stimuli programs, the Manager pushed the respective Fund's geographical exposure to neutral, initiating positions in the largest names within the relevant universe, namely Tencent Holdings and Alibaba Group Holding. As well, the cyclical sectors tilt has been increased through passive instruments by adding VanEck Semiconductors UCITS ETF. Finally, more US and growth exposure has been added through increasing the Salesforce Inc holding.
	From the fixed income front, the manager - aiming to increase the portfolio's duration in a gradual manner, locking in coupons prior to continued easing, and exposure to European exposure - continued to take advantage of selective opportunities, primarily by participating in an initial offering, namely: Accorinvest Group's latest issue, set to mature in 2031.
Market and Investment Outlook	Going forward, the Manager believes that particularly the outcome of the US elections has somewhat fundamentally changed the outlook for both macroeconomic performance and financial markets expected returns. There is no certainty at this point of how much of the Trump economic agenda floated before the elections will eventually become reality, however, increased trade restrictions, higher fiscal deficits and immigration policies will clearly materially impact global economic growth and inflation outlook. This has the potential of resetting the economic cycle from its current phase and altering the current easing monetary cycle, as it is nowhere near clear how potentially conflicting policies will ultimately prevail
	From the equity front, the Manager is aware of the increasingly strong momentum driving equity markets at least over the short term, making less relevant the fundamental approach in the investment process. The Fund continues having a diversified allocation with a focus on quality companies and business models benefitting from secular growth trends agnostic to particular macroeconomic developments. Nevertheless, the Manager is more willing to invest in specific sectors where the overriding sentiment warrants a more attractive upside potential over the shorter timeframe, as well, as capitalizing on opportunities provided by event-driven market overshoots. Cash levels have been materially decreased in order to fully benefit from markets momentum.
